Computer Engineer and Full-Stack & Mobile Developer building scalable web and mobile products, from React Native apps to Go and Node.js backends. Currently in the Innovation division at ALKOSTO, working on real-time, geolocation and enterprise platforms. I work in agile environments guided by quality, efficiency and continuous improvement.

PROFESSIONAL EXPERIENCE

Innovation Software Engineer (Full-Stack & Mobile) — Maracaibo, Venezuela

ALKOSTO | On-Site

October 2025 - Present

- Led the full development cycle of mobile applications (React Native + Expo) and web platforms (React/Next.js), covering e-commerce, delivery, inventory, corporate benefits, and project management systems.
- Built the mapping and geolocation layer of a real-time delivery platform: evaluated Google Maps, first shipped a lower-cost open-source stack (Leaflet + OSRM routing, cutting costs by over 40%), then migrated to Google Maps SDK + Navigation SDK for the functionality and reliability required at scale; added Kalman-filter tracking and low-end device support.
- Designed real-time communication architectures with WebSockets and SSE for order synchronization, push notifications, driver tracking, and inventory updates.
- Built complete inventory management modules, including barcode scanning, cycle counts, location-based auditing, late capture workflows, and dashboards with React Query + Zustand.
- Developed a corporate benefits platform (Next.js, TypeScript, shadcn/ui) with benefit card management, card locking/unlocking, consumption history, company management, RBAC roles, and pending payment gateway integration.
- Implemented an internal Notion-style project manager (Go backend with Gin/GORM, React + Zustand frontend) with Kanban boards, subtasks, BlockNote documents, change auditing, area filters, and data persistence.
- Contributed to the frontend of a goods receiving system, supporting interactive dashboards, heatmaps, D3/Chart.js charts, PDF/XLSX exports, and date-range validation.
- Optimized existing applications through refactoring, React Query caching, and reduction of unnecessary re-renders.
- Implemented continuous user experience improvements: skeleton loaders, accessible modals, error handling, and smooth animations (Lottie, CSS transitions).
- **Key technologies at ALKOSTO:** React Native, Expo, React, Next.js, TypeScript, Node.js, Go (Gin/GORM), WebSockets, Leaflet, Google Maps SDK, Zustand, React Query, Docker, MariaDB/MySQL.

Full-Stack Developer (Internship) — Maracaibo, Venezuela

Coolto Agency | Hybrid

July 2025 - September 2025 (240 hours)

- Collaborated on the full development cycle of web applications using React 18, TypeScript, Node.js, and PostgreSQL.
- Optimized responsive UI components, improving load times by 40%.
- Developed and documented RESTful APIs with JWT authentication and error handling.
- Refactored legacy systems, reducing technical debt and improving performance.
- Integrated monitoring (Sentry) and internationalization (i18n) for three languages.

- Worked with Agile/Scrum, Jest, and Git Flow.

SELECTED PROJECTS

- ReportaYa (undergraduate thesis): Android app (native Java, Firebase) for citizens of Maracaibo to report urban problems in real time with map, photos and notifications. A production rebuild with React Native (Expo), PostgreSQL and its own API is planned.
- El Zuliano (news platform with registration and subscriptions) and Tienda Burgos (e-commerce with cart and authentication): React + Firebase, deployed on Vercel.
- MoviesApp: movie discovery mobile app with authentication and favorites (React Native, Expo, Firebase).

TECHNICAL SKILLS

- **Frontend:** React, Next.js, React Native, Expo, TypeScript, JavaScript, HTML5, CSS3, Tailwind, shadcn/ui, MUI, Responsive design, Component optimization
- **Backend:** Node.js, Express, Go (Gin/GORM), RESTful APIs, WebSockets, JWT authentication, 2FA, role-based middleware, structured logging
- **Mobile Development:** React Native (Expo), Real-time geolocation, Google Maps SDK, Leaflet, OSRM, Kalman filter, push notifications
- **Databases:** PostgreSQL, MySQL/MariaDB, Firebase, SQL migrations, GORM (Go)
- **Tools & DevOps:** Docker, docker-compose, Git (Git Flow), Jest, Sentry, Vite, Webpack
- **Other technologies:** BlockNote, D3.js, Chart.js, react-query, Zustand, react-hook-form
- **Methodologies:** Agile/Scrum, Kanban, Code reviews, Unit testing, Technical documentation

EDUCATION

RAFAEL URDANETA UNIVERSITY **Maracaibo, Venezuela**

Computer Engineering Degree (Graduated) *2021-2025*

LANGUAGES & CERTIFICATIONS

Languages

- Spanish (Native)
- English (Advanced / C2 Proficiency - EF SET 81/100)

Certifications

- Google Cybersecurity Professional Certificate (2025)
  - Foundations of Cybersecurity
  - Connect and Protect: Networks and Network Security
  - Play It Safe: Manage Security Risks
- Introduction to Cybersecurity - Cisco (2025)
